Loyverse POS

Android POS systems are the next big thing on the market for small business owners and it's a wise move to be reading up about Loyverse's point of sale solution. Growing rapidly to #1 in less than a year, Loyverse is expanding globally for many reasons. First, it's efficient. Second it's dynamic.

The range of features you find on our app will bring substance to your business dreams. Try out our inventory management combined with real time sales analytics and you won't be left out of the know on this POS system for android on tablet and smartphone. This cash register app will provide all you need to achieve, and if you ever get stuck, our support team will be there to lend a helping hand.

FEATURES

Point of Sale

Sell from a tablet or handheld

Loyverse POS works on Android handhelds, smartphone and tablet.

Printed or electronic receipts

Give the receipt to customers in a way they prefer: printed or sent to an email.

Multiple payment methods

Whether it's cash or card, integrated or not, or any combination of them – you will have a choice.

Open tickets

Create, save and edit orders. Customers can pay when it's convenient.

Discounts

Apply discounts to the receipt or specific items.

Refunds

Refund the selected item or all items on the receipt.

Item variants

Condense the list of items, simplifying their creation and management. Useful if some products come in multiple versions like different sizes or colors.

Item modifiers

Modify orders easily. Choose add-ons to dishes or how they're prepared in one click.

Cash management

Track cash movement to reduce mistakes and staff manipulation.

Easy scanning

Scan barcodes on items during a sale with built-in rear camera of your mobile device.

Work offline

Make sales with weak or unstable internet. All data will be automatically synced once connection is restored.

Hardware

Supported hardware: receipt printer (Ethernet or Bluetooth), barcode scanner (Bluetooth or USB), cash drawer.

Multiple locations

Manage multiple stores under one account. Track your sales, inventory, employees and customers — everything you need to know in one place.

Dark theme

Use the dark theme in low ambient light environment to reduce eyestrain.

Inventory Management

Items import

Quickly add thousands of items using the CSV-spreadsheets.

Track inventory

Track the stock of products and their components.

Low stock notifications

Receive daily notifications about low stock to make the necessary item orders in time.

Purchase orders

Plan purchases, export records to suppliers, track stock receipts and manage vendor relationships.

Transfer orders

Easily create transfer orders and move stock between your stores.

Stock adjustments

Increase and decrease stock levels for received items, damages and loss.

Inventory counts

Perform full or partial stock-takes with a barcode scanner or manually.

Production

Track stock of items produced out of ingredients.

Label printing

Print barcode labels to effortlessly add items to sales, purchase orders or inventory counts.

Inventory history

Gain insights into the flow of your inventory by viewing adjustment log.

Inventory valuation report

View report on the cost and potential profit of your inventory.

Employee Management

Sales by employees

Track each employee performance and take informed business decisions.

Smart management

Information on the workload per hour allows for efficient management of your staff.

Access rights

Manage access to sensitive information and functions.

Time clock

Employees can clock in/out and system calculates their total hours.

Sales Analytics

Sales trend

Track the sales growth or decline compared with the previous day, week, month and promptly react to changes.

Popular items

Sales by item analytics allows the best-selling items to be determined and therefore the right purchasing decisions can be made.

Shifts

Identify the cash lack at the end of the shift and track employees inaccuracy or manipulations.

Receipts history

Receipts history review allows you to monitor each transaction: sales, refunds, discounts.

Tax report

Browse reports on the tax amount needed to be paid and save time for their calculation.

Reports export

Export sales data to the spreadsheets for detailed analysis.

Loyalty Program

Customers database

Analyze the number of visits and the customer purchases amount, to identify your most loyal customers.

Points reward program

Motivate customers to make recurring purchases, awarding them bonus points.

Notes about customers

Make notes about customers to remember each client's personal preferences and to provide the best service.

Restaurant & Bar Features

Kitchen printers

Use kitchen printers at cafe or restaurant to inform cooking staff what to prepare from an order.

Kitchen display system

Get orders to kitchen automatically, faster and with less errors. Less paper, less mess. Save and go green.

Dining options

Note whether customers are dining in, taking their order out, or requesting delivery.

Predefined tickets

Predefined tickets allows you to quickly assign names to open tickets. For example, Table 1, Table 2, etc

Customer Communication

Customer display system

Display order information to your customers on a separate digital display simultaneously with the sale process.
